

CLIENT STORY

Nurses Reallocated to Patient Care Thanks to Contactless Wellness Screening

THE CHALLENGE

In early 2020, when COVID-19 cases began to spread seemingly uncontrolled in some regions, hospitals, clinics, and other healthcare providers put protocols in place as quickly as possible, utilizing mostly manual temperature-taking methods as employees and patients entered facilities.

These cumbersome measures proved inadequate and put everyone at a greater risk of contracting the highly transmittable virus. So, how do you protect both parties in the middle of a healthcare crisis?

THE SOLUTION

Readiness Rounds Well Screen™ 5-Point Hospital Entrance Protocol, combining multiple critical systems into a single automated platform to efficiently and safely improve vital health monitoring.

Kiosk Features:

- Thermal Temperature Screening
- Employee Badge Reader
- Customizable Wellness Symptom Check Questionnaire
- Visitor & Patient Badge Printer
- Mask Distribution Tracker
- PPE Type Identification

Automated to reduce person-to-person contact, each kiosk needs only power and an internet connection to protect healthcare employees and patients.

THE BENEFITS

With touchless, automated Readiness Rounds Well Screen Kiosks, the client could free up their critical nursing staff and redeploy them to critical patient care.

Technology **streamlines** keeping up with constantly changing regulatory requirements, travel bans, etc.

The client ordered kiosks for every entrance to each of their facilities leading to a **50 percent reduction** in screening staff.

The client is able to screen **over 1.8 million** people annually now, using half the staff with better efficiency.

We can help you reallocate critical staff to their highest and best use with a contactless wellness screening solution. **Call us at 800-544-8877 or visit microage.com**
