

# AWS Workload Migration Assessment

## Unlock your path to the cloud with MicroAge and AWS

The Workload Migration Assessment (WMA) allows organizations that are new to AWS to assess and optimize their on-premises and cloud environments before migration, based on: actual resource utilization, third-party licensing, and applications dependencies.

## Discover the Fastest, Safest Path to the Cloud

A Workload Migration Assessment builds an inventory of your organization's computer resources to determine actual utilization requirements, helping you determine the lowest-cost AWS EC2 instance size and type for each workload and tailor options specific to your environment.

## Benefits of a Licensing Assessment in your Cloud Migration strategy

- Right-size your Environment
  - Complete inventory of compute resources
  - Determine actual utilization requirements
  - Find options tailored to your customer's needs
- Cost Reduction
  - Configure instances to require fewer licenses.
  - Get the most value from existing licensing entitlements
  - Maintain high-performance applications
- Pay for what you need
  - Avoid unnecessary licensing costs and vendor lock-in
  - Use "Bring Your Own License" (BYOL) instances
  - Enable seasonal workloads and support experimentation

## Benefits of a Licensing Assessment

3X

The total cost of a company's licenses can be up to three times the cost of running the same workload on the AWS Cloud.

Customers that run a Workload Migration Assessment are 58% more likely to start a migration.

Customers that have run a Workload Migration Assessment start their migrations 34% faster.
